

Introduction

This course helps participants who either produce or handle waste to to develop more sustainable and cost-effective ways to manage waste in both local and national contexts. It follows the principles of the waste management hierarchy to underpin good practice in waste management, in a way that recognizes waste as a resource.

This will both help to protect the environment, maximize profit and help see regulation and legislation as an important mechanism which recycling organizations must comply with as part of their requirements for a permit.

This two-day course helps participants learn how to use a range of tools to explore opportunities in waste prevention, re-use and recycling; and by so doing, reduce management costs and create commercial opportunities.
